

```
GNU nano 7.2 cal.sh
#!/bin/bash
echo "Job1:Display date"
date
sleep 3
echo "Job 2:Display current user"
whoami
sleep 3
echo "job 3:display calendar"
cal
echo "all jobs finished!"
```

The terminal window shows the nano editor interface. The top bar indicates the file is 'cal.sh'. The script content is as follows:

```
#!/bin/bash
echo "Job1:Display date"
date
sleep 3
echo "Job 2:Display current user"
whoami
sleep 3
echo "job 3:display calendar"
cal
echo "all jobs finished!"
```

The bottom status bar of the nano editor shows various shortcuts: ^O Help, ^X Exit, ^O Write Out, ^R Read File, ^W Where Is, ^\ Replace, ^K Cut, ^U Paste, [Read 10 lines], ^T Execute, ^C Location, ^U Undo, ^A Set Mark, ^J To Bracket, ^_ Justify, ^_ Go To Line, ^E Redo, ^G Copy, ^Q Where Was.

Date cmd show the date.

Whoami shows the current user.

Cal show the calender of current month

```
rvu@rvu-OptiPlex-SFF-7020:~$ sudo ./cal.sh
[sudo] password for rvu:
Job1:Display date
Tue Feb 24 02:10:39 PM IST 2026
Job 2:Display current user
root
job 3:display calendar
    February 2026
Su Mo Tu We Th Fr Sa
 1  2  3  4  5  6  7
 8  9 10 11 12 13 14
15 16 17 18 19 20 21
22 23 24 25 26 27 28

all jobs finished!
```

The terminal shows the execution of the script. It prompts for a password, then displays the output of each job:

```
rvu@rvu-OptiPlex-SFF-7020:~$ sudo ./cal.sh
[sudo] password for rvu:
Job1:Display date
Tue Feb 24 02:10:39 PM IST 2026
Job 2:Display current user
root
job 3:display calendar
    February 2026
Su Mo Tu We Th Fr Sa
 1  2  3  4  5  6  7
 8  9 10 11 12 13 14
15 16 17 18 19 20 21
22 23 24 25 26 27 28

all jobs finished!
```
